

~~WUW~~

8610 - Session # 4
(CONT.)

~~at project~~ One project might involve an individual in the building monitoring or coordinating the activities of persons who ~~are~~ located outside the facility; & who record, analyze, develop activities relating to "hard science / technological things" and the ~~also~~ associated idea of "finding things out."

The structure itself is "technically" oriented involving technical equipment, but this interest extends into greater socio-economic spheres external to structure. "Makes connections anywhere it can." This agency "takes action" rather than produces an end product (whether tangible or informational).

1 year from now, effort still continues, but is scaled back - as if part of resources has moved to another place to form a sister agency facility.

mission

Structure is "technical" - contains technical equipment, but interest in "technical" extends into socio-economic sphere external to structure. Makes connections anywhere it can.

Takes action - doesn't "produce" as primary function. Can cooperate/resignate ~~at~~ non-organic elements if necessary.

As US
reminds
me of tech

comfortably appointed. Don't pay attention
to surroundings. They have equipment
they monitor. May wear headphones.

Summary

People w/in structure walk around, sit, wear greyish clothing, have short hair, are predominantly males, operate equipment, often work individually but consult w/ each other; work at console. Facility has an ~~open~~ ongoing mission involving diverse projects + operations, people are serious, relatively humorless, dedicated & believe in what they're doing.

A project might involve an individual in the bldg monitoring or coordinating the activity of person(s) exterior to facility. Exterior people record, analyze, develop; activities are related to "hands-on"/technological things, & the idea of "finishing things out."

Structure itself is "technically" oriented, involving technical equipment, but interests in "technical" extend into greater social-economic sphere exterior to structure. Makes connection w/ where it can. Agency "takes action" rather than produces end product (whether tangible or informational).

1 yr. from now, effort still continues, but is ~~scaled~~ scaled back - as if part of resources has moved to another place as ~~core~~ ^{core} to form sister agency/facility.
